World Wheat Flour Trade Reference Tables and Graphs
(1973/74 - 1985/86)

The cover chart shows the development of the world wheat flour trade with respect to the market share by major suppliers. The European Community has long been the front runner in exporting flour and has seen varying degrees of competition from the United States, Canada, and Australia. The United States has been able to maintain a relatively consistent level of flour exports, while Canadian and Australian flour exports have dwindled.

Key Points

Several factors influence world flour trade, such as the availability of substitutes, increased domestic production, increased subsidization, and dramatic shifts in weather conditions. Shifts in trade patterns in major flour markets shown by major flour suppliers and importers can be explained by the relationship among these factors.

The most important development in wheat trade since 1973/74 has been Africa's emergence as the destination for about 88 percent of shipments, up from 33 percent a decade and a half ago. Leading destinations include Egypt, Libya, and Sudan, while the United States and the European Community (EC) are the two main suppliers to the continent.

Several important markets have shown major shifts in import patterns over the past years.

-Sri Lanka, once an importer of over 400,000 tons, is now able to meet domestic flour needs as a result of the recently developed internal milling industry.

-Saudi Arabia is also curbing flour imports, although the majority of the flour that is imported comes from the United States whereas it had been a mixed market.

-Egypt, a major credit market, continues to follow a trend of increased flour imports, mainly from the EC and the United States, with the EC now taking the major share of the market.

-The Soviet Union, a major wheat grain importer, has been a sporadic buyer of wheat flour, mainly from Canada on mixed terms of cash and credit.

Introduction

These wheat flour trade data and graphics were compiled to provide a reference of major exporters' flour trade by destination and of major importers' flour trade by origin. The tables and charts are all based on data released by the International Wheat Council (IWC), London, U.K. All yearly data are in July/June marketing years and are reported in thousands of metric tons (1,000 MT), unless otherwise noted.

The major exporting countries, the EC, United States, Canada, and Australia, export over 90 percent of the total world wheat flour. Australia's important role in the world wheat grain trade is not reflected in its contribution to the world wheat flour trade. Traditional flour exporters like Argentina have basically abandoned the flour market, while minor exporters are too numerous to mention, constituting less than 10 percent of world trade.

Explanatory Notes

Quantities below 45 metric tons will appear as 0.0 in the table due to rounding of numbers. Not all values appear on every graph; certain data were omitted if it was determined that they did not add to the value of the graph, i.e., if the values were too small to be observed.

The "Others" category listed for each exporter includes undesignated and unknown destinations. In some instances, the "Others" category is used for countries that were formed or dissolved during the time period of the matrix, e.g. "Arab Gulf Ports", as used by IWC, would be listed under "Others".

The graphs do not necessarily show all sources or destinations that are listed in the data tables; at least 75 percent of origins and destinations are represented. The total world trade data excludes EC wheat flour intratrade.

All data are as reported by the IWC and may differ from data from other sources. This release updates similar, previous issues and is believed to be a concise and accurate description of the world flour trade.
